Art Unit: 2636

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 24 and 33-35, drawn to liquid detection using chemical properties, classified in class 436, subclass 39.
  - II. Claims 25-30 and 36-39, drawn to liquid detection including indication, classified in class 340, subclass 618.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because an generated signal is not needed in method of group I in order to detect the presence of target molecule. The subcombination has separate utility such as detecting liquid and generate a signal to indicate liquid is detected.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 2636

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
